## DETAILED ACTION

### *Specification*

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter.

See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: The recitation for “ Modulo”

as claimed in claims 22 and 26 was not found in the original specification.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 22 and 26 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The recitation for “ Modulo” as claimed in claims 22 and 26 was not found in the original specification or claims.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 3,8 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The following lack proper antecedent basis:

In claim 3, line 7, " the comparator" ; on line 8, " accumulation" ;

In claim 8, line 4, " the desired clock frequency" ;

In claim 9, line 4, " the desired clock frequency" .

6. Claims 1,2,4-7, 10-21, 23-25 are allowed.

The examiner could not find fair suggestion for the NCO with quotient accumulator, remainder accumulator, arithmetic circuit, and circuitry as claimed in claim 1, for claim 4, a NCO with means for generating a remainder sum comprising means for generating a carry signal based on relative values of the remainder sum and divisor input value; means for accumulating a quotient sum in response to an input Quotient value and adjusting the quotient sum in response to the carry signal; For claim (13) the variable frequency oscillator with first, second control inputs and clock input and digital output being controlled as recited with first and second control inputs; a conversion circuit, DAC, and conditioning circuit providing a second clock signal with frequency that varies in relation to first and second control inputs...(claim 13).
